WEATHER BUREAU

General Summary of Weather Conditions

Canada's weather was marked by extreme contrasts in December 1961. In the western provinces mean temperatures ranged to sixteen degrees below normal, while in the Yukon Territory they were nineteen degrees below normal at two stations. By contrast, in the provinces of Ontario and Quebec and those on the Atlantic coast, December mean temperatures were above normal. The greatest positive anomaly was reported from Indian House Lake in far northern Quebec where the mean temperature was sixteen degrees above normal. The December precipitation pattern was extremely irregular with both excesses and deficiencies being reported from every province.

In the province of British Columbia the first week of December was mild except for low temperatures in the northern interior on the first, but there were cold spells in the second and third week. On the first a temperature of sixty was reported from Powell River equalling the highest temperature in the province during the month. Toward the end of the of the month there were again a few mild days. For the month as a whole, mean temperatures were near normal at Vancouver and in the Okanagan Valley. Elsewhere in the province there were temperature deficiencies which ranged from one or two degrees in coastal areas to four to six degrees along the British Columbia - Alberta boundary and to thirteen degrees in the north eastern corner of the province.

December precipitation was rather irregularly distributed throughout the province of British Columbia. There were small deficiencies on Vancouver Island except in the Victoria area where there were excesses of about twenty per cent. There were excesses ranging to about twenty per cent also in the Vancouver area while in the Okanagan and Kootenay Valleys there were excesses of twenty per cent to fifty per cent. In the central sections of the province there were a few stations with precipitation deficiencies but in general there were excesses averaging about twenty-five per cent, with a few stations receiving over twice the normal fall. The heaviest falls in the country were reported from the northern tip of Vancouver Island where Tahsis reported 26.97 inches and Zeballos, 25.03 inches for the month.

December was one of the coldest Decembers on record in the Prairie Provinces. Not since 1955 has there been a comparably cold month and December 1961 was colder than this at many places in the central prairies. At Regina and Edmonton the last December as cold as 1961 was 1933. The first week of December was fairly mild but major cold spells developed from the 8th to the 12th and again from the 17th to the 21st when new record lows for the date were set in the Peace River District and in northern Alberta. Mean temperatures for the month ranged from three to ten degrees below normal in Manitoba, eight to twelve degrees below normal in Saskatchewan and southern Alberta and twelve to sixteen degrees below normal in the Peace River district. In the southwestern corner of Alberta chinooks in the first week of the month brought mean temperatures a little higher than other parts of the prairies and here deficiencies ranged from four to seven degrees.

December precipitation was irregularly distributed over the Prairie Provinces. There were general deficiencies of twenty per cent to fifty per cent in the extreme southern section of Alberta and of ten per cent to thirty per cent in the Peace River district. In the remainder of Alberta and throughout the province of Saskatchewan there were generally excesses some of which ranged to one hundred per cent or higher. However, these were offset by scattered reports of deficiencies. In Manitoba there were deficiencies of twenty per cent to sixty per cent in the Brandon-Portage la Prairie-Dauphin region while elsewhere in the grain regions of the province, there were excesses of twenty per cent to sixty per cent. On the 17th an outbreak of arctic air was accompanied by blizzard conditions in southern Alberta and Saskatchewan.

The first week of December was mild in all sections of Ontario particularly in the south where the mild weather lasted until the 13th. On the 4th, a maximum temperature of sixty degrees was reported at St. Catharines equalling the highest reported in Canada for the month. For the month as a whole, mean temperatures were one or two degrees above normal in western Ontario, and two to four degrees above normal in the central sections of the province and northward to James Bay. There were excesses of one or two degrees around the Lakehead,while in the district of Patricia and the Lake of the Woods area there were temperature deficiencies of one or two degrees.

December rainfall was generally above normal due to the mild weather, while in most areas of the province, snowfall was below normal. For the month as a whole, there were precipitation deficiencies of thirty per cent to fifty per cent in the southwestern counties of southern Ontario, and smaller deficiencies in the Toronto area and the Ottawa valley. Elsewhere in southern Ontario there were excesses which ranged to thirty per cent. In northern Ontario there were excesses ranging to eighty per cent in the extreme western district and to as much in the Districts of Timiskaming and Cochrane. On the other hand, stations north of Lake Superior reported deficiencies which ranged to forty per cent.

December mean temperatures were above normal in all regions of the Province of Quebec. This was the fifth consecutive month in which this has been the case. The mildest weather came during the first half of the month and especially on the 5th when many stations reported temperatures in the forties in the southern parts of the province. Mean temperatures were four to six degrees above normal in the St. Lawrence River valley above Quebec, and six to eight degrees above normal in the Lake St. John district and on the Gaspe Peninsula. In the central interior of the province, there were excesses of seven to twelve degrees, and in the far north Indian House Lake reported a mean temperature 16 degrees above normal, the highest positive anomaly reported anywhere in Canada for the month.

December snowfall was somewhat below normal in the southern districts of Quebec but was heavy in the Lake St. John district and along the north shore of the St. Lawrence. A few stations reported precipitation deficiencies in the Ottawa valley and the upper part of the St. Lawrence valley but generally stations in southern Quebec reported excesses of ten per cent to forty per cent. In the central interior of the province, there were excesses of fifty per cent at Fort George and of over one hundred per cent at Knob Lake but other stations reported deficiencies ranging from 9 per cent at Fort Chimo to 67 per cent at Cape Hopes Advance.

December was a stormy month in the Maritime Provinces. The first major storm of the month occurred on the 5th and other major outbreaks followed on the 13th, 20th, 24th and 25th and again on the 28th and 29th. The storm on the 24th and 25th brought the heaviest precipitation of the month and gusts over 60 miles an hour but the storm was not a crippling one. Despite the prevalence of cyclonic activity over the Maritimes during the month, a few regions reported below normal precipitation, mostly in the southern section of Nova Scotia. Aside from this region, there were excesses of ten per cent to fifty per cent in all three Maritime Provinces. At Ingonish Beach a total of 9.52 inches of precipitation was received, the highest anywhere in the Maritime Provinces.

During a considerable portion of the month, the Maritime Provinces were under the influence of maritime air masses and this kept temperatures up particularly during the night. As a result mean temperatures averaged four to six degrees above normal in Nova Scotia and Prince Edward Island and five to eight degrees above normal in New Brunswick.

The highlight of December weather on the island of Newfoundland was the great Atlantic storm of December 8th and 9th. This storm caused considerable damage along the east coast as northerly gales destroyed fish stages, wharves, and boats and washed out roads. On the 9th the average wind speed for 24 hours at St. John's Airport was 35 m.p.h.while the highest hourly speed was 45. This was eclipsed in another storm on the 18th when an hourly speed of 50 m.p.h. was recorded at the same point. Despite these storms, precipitation was below normal at many Newfoundland points, particularly on the Avalon Peninsula where there were deficiencies of forty per cent or fifty per cent. In the remainder of the island the precipitation distribution was very irregular, ranging from a deficiency of 38 per cent at Grand Falls to an excess of 68 per cent at Deer Lake. For the island as a whole the average precipitation was slightly below normal.

Atlantic storms kept continental arctic air from reaching the Island of Newfoundland during the month. As a result mean temperatures were three to five degrees above normal throughout the Island.

Along the Labrador coast December weather was very mild. Mean temperatures ranged from eight to fourteen degrees above normal to make it one of the warmest Decembers on record. December precipitation was light along the Labrador coast with most coastal regions experiencing deficiencies of forty per cent to sixty per cent. The only exception was at Cape Harrison which experienced an excess of over fifty per cent.

In the Yukon Territory,December 1961 was one of the coldest on record. At both Dawson and Whitehorse, the minimum temperature was lower than that in any December since records began at those stations. For the month as a whole, mean temperatures were 19 degrees below normal at Dawson and Mayo, the greatest negative departures achieved anywhere in Canada during the month. Elsewhere over the Yukon Territory temperatures were seven to seventeen degrees below normal.December precipitation was not far from normal for the Yukon Territory as a whole the range being from a deficiency of 18 per cent at Dawson to an excess of forty per cent at Teslin, with most stations showing small excesses.

December was cold in the District of Mackenzie. Mean temperatures ranged to fifteen degrees below normal, averaging about twelve degrees below normal. In sharp contrast the District of Keewatin had December mean temperatures ranging from near normal along the western edge of the district to twelve degrees above normal at Chesterfield Inlet. In the eastern section of the Arctic Archipelago many stations reported above normal temperatures for December, particularly Eureka, where there was an excess of nine degrees, and Frobisher where there was an excess of eight degrees. In the western Arctic, there were generally deficiencies which ranged to five degrees.

December precipitation was generally heavy on the mainland sections of the Northwest Territories. In the lower section of the Mackenzie River valley, Fort McPherson and Fort Good Hope reported more than three times the normal fall, and at Chesterfield there was almost four times the normal fall. A number of other stations reported twice the normal, while there were small deficiencies scattered here and there throughout the area. On the Arctic Archipelago, distribution of precipitation was very irregular the range being from nil at Mould Bay to three and a half times normal at Resolute. There was no particular pattern evident although more stations reported excesses than deficiencies.

DECEMBER 1961

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month, including the rainfall and the equivalent of the snowfall.
SUN The total bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches, lying on the ground at the end of the month, (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
